

DEPARTMENT OF DIAGNOSTIC RADIOLOGY

GUJRANWALA TEACHING HOSPITAL | GUJRANWALA MEDICAL COLLEGE

HOD: Prof. Dr. Mian Waheed Ahmad • Senior Registrars: Dr. Samiya Shahzadi / Dr. Sidra Ghaffar

PATIENT NAME M. BASHIR	TOKEN / RADIOLOGY ID #7961	AGE / GENDER 78 Y / Male	DATE OF EXAM 2026-09-30
MODALITY & PROTOCOL CT Urogram (Multiphasic CT Urinary Tract)	REPORTING DATE 2026-09-30	REFERRING CLINICIAN Department of Urology	
CLINICAL INDICATION LUTS, haematuria evaluation, suspected nephrolithiasis.		COMPARISON No previous imaging available for comparison.	

TECHNIQUE

ACQUISITION PARAMETERS

Multiphasic CT urogram of the abdomen and pelvis was performed including non-contrast, nephrographic, and delayed excretory phases with multiplanar reformations.

FINDINGS

RADLEX ORGAN GROUPING

KIDNEYS & URETERS

- Right Kidney:** A non-obstructing calculus measuring 5.4 mm is noted in the mid pole of the right kidney. No significant hydronephrosis or perinephric fat stranding.
- Left Kidney:** Multiple simple cysts are identified in the left kidney involving upper, mid, and lower poles. The largest cortical cyst at the upper-to-mid pole measures 10 × 8 mm, and an additional medullary cyst at the upper pole measures 1.8 × 1.8 cm. Morphological features are consistent with Bosniak Type I simple benign cysts.
- Contrast Excretion & Ureters:** Normal prompt and symmetrical bilateral excretion of contrast on delayed excretory images. Both ureters opacify throughout their course with normal calibre and no obstructive filling defect.

LIVER & UPPER ABDOMEN

- Liver:** A small simple hepatic cyst measuring 7 × 6 mm is noted in hepatic segment V. The remainder of the hepatic parenchyma is normal in attenuation with no solid focal lesion.
- Gallbladder, Spleen & Pancreas:** Gallbladder, biliary tree, spleen, and pancreas are unremarkable.

PELVIS & LOWER THORAX

- Urinary Bladder & Pelvis:** Bilateral pelvic calcifications (phleboliths) are noted. Urinary bladder demonstrates smooth luminal contour with normal mucosal enhancement and no intraluminal lesion.
- Lung Bases:** Visualised lung bases are clear with no focal consolidation or pleural effusion.

IMPRESSION

- Right mid-pole renal calculus measuring 5.4 mm without significant obstructive hydronephrosis.
- Multiple left renal cysts classified as Bosniak Type I (benign), largest measuring 1.8 × 1.8 cm.
- Normal bilateral excretory function with prompt ureteric opacification on delayed images.
- Incidental 7 × 6 mm simple hepatic cyst in segment V.
- Bilateral pelvic phleboliths.

RECOMMENDATIONS

- Urology consultation for conservative management / metabolic workup of right mid-pole renal calculus. - Routine follow-up; no intervention required for Bosniak Type I renal cysts.

PRIMARY REPORTING RADIOLOGISTS

Dr. Sana Fatima — MBBS (WMO Diagnostic Radiology)

Dr. Faisal Maqsood Anwar — MBBS, FCPS-II Resident

Dr. Areeba — MBBS, FCPS-II Resident
