

DEPARTMENT OF DIAGNOSTIC RADIOLOGY

GUJRANWALA TEACHING HOSPITAL | GUJRANWALA MEDICAL COLLEGE

HOD: Prof. Dr. Mian Waheed Ahmad • Senior Registrars: Dr. Samiya Shahzadi / Dr. Sidra Ghaffar

PATIENT NAME ZIA	TOKEN / RADIOLOGY ID #7929	AGE / GENDER 75 Y / Male	DATE OF EXAM 2026-09-30
MODALITY & PROTOCOL Contrast-enhanced CT of the Neck and Face		REPORTING DATE 2026-09-30	REFERRING CLINICIAN Department of ENT & Head and Neck Surgery
CLINICAL INDICATION Oropharyngeal lesion, progressive dysphagia and airway narrowing.			COMPARISON No prior CT scans available for comparison.

TECHNIQUE

ACQUISITION PARAMETERS

Contrast-enhanced CT of the neck and face was performed from skull base to thoracic inlet with multiplanar reformations.

⚠ CRITICAL CLINICAL NOTIFICATION

Acute radiological finding requiring immediate treating team intervention.

CRITICAL VALUE: Airway compromise communicated directly to ENT On-Call Registrar at 12:45 PM.

FINDINGS

RADLEX ORGAN GROUPING

PHARYNX & ORAL CAVITY

- Right Peritonsillar / Oropharynx:** An irregular, heterogeneously enhancing soft tissue mass measuring 3.3×2.0 cm is identified in the right peritonsillar / oropharyngeal space. The mass infiltrates the uvula, base of tongue, and the right parapharyngeal space, causing marked airway luminal narrowing.

CERVICAL LYMPH NODES

- Lymph Nodes:** Bilateral cervical lymphadenopathy extending to Level V is noted, largest along the right jugulodigastric chain.

THORAX (PARTIALLY INCLUDED)

- Lungs:** Fibrocystic changes noted in the right upper lobe. Multiple bilateral pleural-based non-calcified solid (STD) nodules are noted, the largest in the left upper lobe measuring 11×19 mm, suspicious for pulmonary metastases.
- Mediastinum:** Mediastinal lymphadenopathy noted.

UPPER ABDOMEN (VISUALISED)

- Kidneys:** Bilateral large simple renal cortical cysts: right renal cyst measures 7.4×5.2 cm; left renal cyst measures 4.0×4.0 cm.

BONES

- Cervicothoracic Spine:** Multilevel degenerative spondylotic changes with scoliotic deformity noted.

IMPRESSION

- Right peritonsillar / oropharyngeal heterogeneously enhancing soft tissue mass (3.3×2.0 cm) with infiltration into the uvula, tongue base, and parapharyngeal space with critical airway compromise; consistent with primary malignancy (e.g. squamous cell carcinoma).
- Bilateral cervical lymphadenopathy extending to Level V.
- Multiple bilateral pleural-based lung metastases (largest LUL 11×19 mm) and mediastinal lymphadenopathy.
- Large bilateral renal simple cortical cysts (right 7.4×5.2 cm, left 4.0×4.0 cm).
- Thoracolumbar degenerative spondylosis with scoliotic deformity.

RECOMMENDATIONS

- URGENT: Airway assessment and ENT consultation for biopsy and airway security. - Multidisciplinary head and neck oncology tumour board review.

PRIMARY REPORTING RADIOLOGISTS

Dr. Sana Fatima — MBBS (WMO Diagnostic Radiology)

Dr. Faisal Maqsood Anwar — MBBS, FCPS-II Resident

Dr. Areeba — MBBS, FCPS-II Resident

REVIEWED & APPROVED BY (CONSULTANTS)

Prof. Dr. Mian Waheed Ahmad

MBBS, FCPS, BSc (Radiology) • Head of Department

Dr. Samiya Shahzadi / Dr. Sidra Ghaffar (Senior Registrars)
